Data released since your last Directors’ meeting show the economy may be emerging from its soft spot. Although the labor market remains weak and business investment low, recent data indicate some improvement overall. The four-week moving average of initial claims (ending June 21st) declined slightly in June, compared to May. Recent claims data suggest little or no change in payroll employment and in the unemployment rate for the month of June.

In May, the housing market remained strong as housing starts, building permits, and new and existing home sales all rose. Real disposable income and consumption showed a moderate increase in May. In addition, preliminary retail sales surveys for June suggest further increases. During the second quarter, auto sales were stronger, compared to the first quarter.

Recent surveys for the manufacturing sector show continued weakness, although the pace of contraction has slowed significantly.

The four-week moving average ending June 21st indicate initial claims are continuing to edge slightly downward.
