

# Cyber Threat Sharing

---

4  
November 10, 2015

Don Anderson  
Senior Vice President &  
Chief Information Officer  
Federal Reserve Bank of Boston

# Background

---

## Driving Factors

Implementation of a cohesive information security strategy continues to become both more costly and complex.

Increasing numbers of organizations are confronting strategic decisions on how best to secure their companies' most important assets.

## Call to Action

At a 2013 meeting of the Federal Advisory Committee to the Federal Reserve Board of Governors, members discussed the inability of US depository institutions (DIs) to effectively share cyber-threat information between one another.

Members noted: the Fed could expand its role by providing cyber security advisory services as a trusted interlocutor between banks and other government agencies.

## Federal Reserve Capability

The Federal Reserve Bank of Boston has both local and national expertise in cyber security and threat sharing experience as a member of the Advanced Cyber Security Center ([ACSC](#)).

In addition to playing a role as a convener, there will be a role for the Fed in helping organizations with cyber security as well.

# The Solution

- Multilateral non-disclosure agreement amongst participants
- Separate from Supervision and Regulation
- Threat Sharing Group
  - Bi-weekly meetings (in person and virtual)
  - Sharing portal
  - Focus: Information Sharing, Best Practices, Special Topics
- Quarterly Seminars
  - Emerging threats and research
- Annual Conference
  - Trends and Industry Perspective

# Key Benefits

---

\* Size of circle indicates number of times specific benefit was mentioned by banking industry participants, during focus groups.
