Job vacancies exist even in a healthy labor market due to turnover and constant flux in the labor market. As businesses expand, they need to hire individuals who meet specific skill requirements, and employees with skills that are in demand leave jobs for better positions. As the economy enters a downturn, job vacancies decline due to an overall decline in labor demand, there is an increase in the number of applicants available to fill positions, and there is less turnover as employees stay longer in jobs. At the end of 2007, the job vacancy rate in the Central Mass was 3.1 percent. As a result of the Great Recession, it fell to 1.8 percent by the end of 2009, making it the lowest among all regional labor markets. As the economy started to recover, the vacancy rate rose, hitting 2.6 percent by the end of 2010. At that point, Central Mass accounted for 10.2 percent of the state’s employment but only 8.2 percent of the job vacancies.

**Source:** Massachusetts Executive Office of Labor and Workforce Development Job Vacancy Survey.

**Note:** The Massachusetts Job Vacancy Survey is collected for seven regions in the state. Vacancy rates are calculated by taking the total number of job vacancies and dividing by the total number employed in the region. The Greater Boston region covers portions of the Northeast, Metro South/West, Central Mass, and Southeast regions of the regional labor market profiles. The vacancy information for the Greater Boston region is used as an approximation of the vacancies trends experienced in the Metro South/West and Boston/Metro North regions.
