

## DISTRIBUTION OF OCCUPATIONS WITHIN SUPERSECTORS IN GREATER BOSTON (2008–2010)

We can also consider what the distribution of occupations within a given supersector looks like. Certain occupations account for major shares of employment within a supersector. For example, Outside Greater Boston sees nearly 45 percent of its employment in the Education & Health Services supersector coming from two occupations: Education, Training, & Library Services and Health-care Practitioners & Technical Services. Further, the Construction supersector has over two-thirds of its employment in Construction & Extraction occupations. While some occupations account for an overwhelming majority of the employment in a given supersector, others consistently account for a large share of employment in each supersector. In fact, the two largest occupational groups—Office & Administrative Support and Management—together account for a sizable share of jobs within every supersector (ranging from 18.0 percent in Leisure & Hospitality to 47.7 percent of Financial Activities).

**Source:** US Census Bureau 2008–2010 American Community Survey PUMS data files.

**Note:** Due to sample size limitations in the Census and American Community Survey, it is not possible to provide an occupational distribution across industries for small geographic areas. Therefore, Metro South/West and Boston/Metro North were grouped to increase observations and provide an occupation/industry distribution for Greater Boston. With relatively strong concentrations in the occupational categories of Management and Business & Financial Operations, and in the supersectors of Professional & Technical Services and Financial Activities, the labor market compositions of Metro South/West and Boston/Metro North are fairly similar. When combined, these two regions account for 46.4 percent of the state's employment. In comparison, the labor markets outside of the Greater Boston region (Berkshire, Pioneer Valley, Central Mass, Northeast, Southeast, and the Cape & Islands) tend to have stronger concentrations in the supersectors of Trade, Transportation, & Utilities, Leisure & Hospitality, and/or Manufacturing, and in the occupational categories of Sales, Office & Administrative Support, and Production. While there are differences among the regional labor markets exclusive of Greater Boston, industrial and occupational concentrations are likely similar enough to approximate their distributions for these labor markets.

## DISTRIBUTION OF OCCUPATIONS WITHIN SUPERSECTORS IN GREATER BOSTON (2008–2010)
